About us:

An Expertise you can rely on!

We are an HVAC, Ducting and professional Robotic Duct Cleaning services company based in Hyderabad, India offering services across PAN India.

Why us?

All of our services are based on our principles of **Quality, Values, Safety and Reliability**. A Professional, Adaptive & Client-focused company offering bespoke solutions and services in a quick turn-around time with Service Satisfaction. The attention to detail and dedication we put into every job is unrivalled and has earned us the trust of our customers.

Our unique selling proposition (USP) lies in covering a wide spectrum of services in HVAC thereby, being a one-stop service provider for our expanding customer base.

IAQ

Indoor Air Quality (IAQ)

Indoor Air Quality is one concern that building managers and building inhabitants have when they decide to investigate the HVAC system. Through normal occupation in a building, we generate many contaminants and air pollutants, such as dander, dust, and chemicals. These contaminants are pulled into the HVAC system and recirculated on an average of 5 to 7 times per day. Over time, this re-circulation causes a build-up of contaminants in the duct work.

While a contaminated HVAC system doesn't necessarily mean unhealthy air, the situation may be contributing to larger health issues or harboring contaminants that could cause serious problems for people with respiratory health conditions, autoimmune disorders or some environmental allergies.

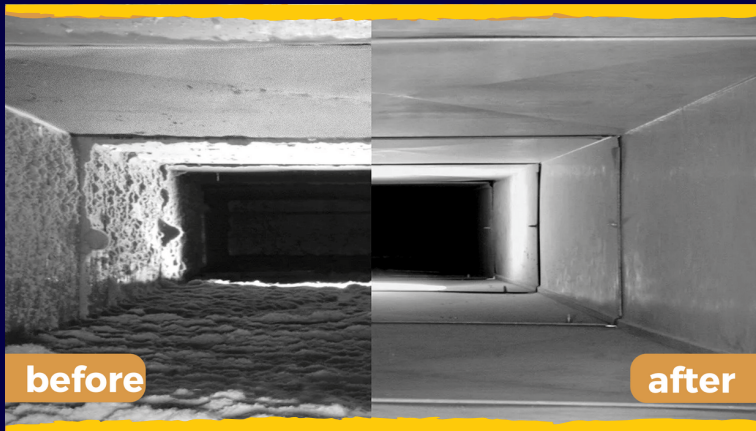

Duct Cleaning Services:

Duct cleaning generally refers to the cleaning of various heating and cooling system components of forced air systems, including the supply and return air ducts and registers, grilles and diffusers, heat exchangers heating and cooling coils, condensate drain pans (drip pans), fan motor and fan housing, and the air handling unit housing.

Do you Know?

- 78.56 percent the **AVERAGE RETURN ON INVESTMENT** of an IAQ improvement program
- CLEAN HVAC SYSTEMS reduce **energy costs** by over 30 **PERCENT**
- Indoor Air Pollution (IAQ) is one of our biggest **environmental health threats**, bigger than toxic waste sites and the destruction of the ozone layer - US Environmental Protection Agency.
- Around the world, **one death occurs** EVERY 20 SECONDS due to poor Indoor Air Quality.

Why Need for Duct Cleaning?

The main purpose of an air conditioning system is to improve the quality of air in a room. We often think they only cool or heat the room but they also regulate airflow, introduce cool breezes in closed spaces, and eliminate dust and other particles from the air. While regulating air conditions in your office, the AC systems collect a lot of dirt and are not always successful in pushing all of it outside. Like any other machinery, air conditioners need some TLC (Temperature Limit Control).

The best maintenance you can give your AC system is to have a regular cleaning program which extend the life of your AC system and keep your air fresh for a longer duration. There are a number of items which contribute to duct contamination. These would include Common Dust, Pollen, Mold, Mildew, Algae, Bacteria, Rodents, Cobwebs, Plaster, Construction Materials, loose Fiberglass, Skin Flakes, Live and Dead Insects, Carpet Fibers, Drywall Dust and much more. Over time, this re-circulation of contamination causes a build-up of contaminants in the duct work.

One of the most basic ways to keep your AC in optimal working conditions is to clean out ducts and filters regularly. In order to do a good job, it is important to find the right **AC Duct Cleaning Equipment and Trained Personnel** to carry out the task.

Commercial Air Duct Cleaning (HVAC Remediation)

We provide Duct Cleaning Services using cutting edge **Robotic Technology** to give you Healthier Indoor Air Quality (IAQ) by lowering your Energy bills and protecting your Sensitive Equipment from Dust & Heat. We use all the latest **high-powered equipment** that's powerful enough to tackle even the dirtiest air ducts. Every component of your system – from the air handling unit components (AHU), outdoor air intakes and reheat coils to the supply, return and exhaust of the ductwork – will be expertly cleaned. We do undertake the **Remediation of Kitchen Exhaust Systems** as well.

We cater our services to all kinds of, commercial buildings from **Offices and Hotels to Retail Establishments and Restaurants**. No matter how large or how small your commercial premises, we'll have a Cleaning and Maintenance program (Preventive Maintenance Contract) to suit your system and budget.

We do **HVAC Inspection, Cleaning and Restoration**. Restoration of HVAC system components is the process of preparation, refurbishment, resurfacing, repair, or replacement of any surface common to the Air Stream.
